ART+LOGIC
SOFTWARE INNOVATION

Coding the "impossible." ®

MOBILE, WEB, OR DESKTOP APPLICATIONS

Work with us to create the app you need. Even if you're still at the idea stage, talk to us, share your vision with us and we'll help you design and develop it.

Our elite team of designers and developers can create responsive, flexible, industry-compliant applications for any of the devices you rely on for your work, from smartphones to tablets to integrated, web-based platforms that you can access, monitor, and control from a computer.

IoT, WEARABLES, AND SMART TECH

The global IoT market might grow to a $14.4 trillion by 2022. As consumers and businesses create more data, it will be vital to track that massive amount of data effectively through a clean, well-designed user-interface.

Whether you're starting from scratch or have to port your software from one platform to another, we can help. Work with our talented team to bridge the gap between your expertise and the development of software that meets the needs of your customers and your workforce.

BLOCKCHAIN

It's not just about cryptocurrencies. Blockchain technology might hit an estimated $14 billion in value by 2022. And it's all about the data.

Could your business or organization benefit from blockchain technology? If you're unsure, talk to us. We can help you determine, for instance, if blockchain could help streamline your supply chain, track goods and services, or manage information more efficiently.

TALK WITH ONE OF OUR DEVELOPERS

Our software engineers are language agnostic and proficient in the latest programming developments, platforms, and frameworks.

In addition to their areas of expertise, our elite developers specialize in finding and implementing the right software to meet your unique requirements. Our milestone-driven software development process is agile, efficient, and transparent. It's designed for your success.

Be bold.

Envision the future.

Let's create it together.

ART+LOGIC
SOFTWARE INNOVATION

INNOVATIVE SOFTWARE SINCE 1991

WEB, MOBILE, WEARABLE APPLICATIONS

We've created apps that can monitor devices, schedule inspections, map efficient inspection routes, calibrate field data, facilitate inspections, entertain, educate, train and more.

INDUSTRY COMPLIANT SOFTWARE

Our software engineers are based in North America and have worked on compliant software projects for major industries and institutions throughout the country. Our client's projects are never outsourced or sent overseas.

INTERNET OF THINGS (IoT) APPS

As the impact of IoT continues to grow, we can help your business grow with it. We've been working with IoT since before the term was coined and are experts at engineering software to process big data.

SECURE SOFTWARE DRIVEN BY YOUR DATA

Our developers are committed to protecting your data. Whether analyzing your information, creating your software, or introducing blockchain technology to your workflow, we follow the highest industry standards for security and protection.

OUR DEVELOPERS DO THE HARD STUFF

Art+Logic designers and developers know how to solve even the most unusual and thorny problems — often where others have failed. We're comfortable with the entire software development process, from concept to maturity. When there are unforeseen circumstances, or your project has its first hiccup, you can rely on us to know how to overcome any unexpected technical issues. We follow a proven software development process that is built on realistic estimates, a flexible methodology, and a belief in raw talent. Our developers apply the principles of "agile" software development in a flexible, practical way that respects the iterations of software development, and allows for any necessary adjustments or changes of course. We only hire great programmers, comfortable in the knowledge that a "great" programmer can be ten times more productive and innovative than an "average" one.

OUR PROCESS

Our work revolves around taking our clients' ideas and bringing them to life in a form that's better than they could have imagined. Our clients range from businesses in need of custom software, to skilled development shops, to people with an idea and some funding. We work with companies, individuals, and organizations from every possible industry, who often come to us with problems and ideas that other developers have told them aren't practical to develop or feasible to tackle. We combine our clients' industry expertise and domain knowledge with our expertise in software development in order to create and deliver great software that meets business requirements while complying with any rules, regulations, and standards that come into play. Our success with long-term client relationships depends on repeat customers and word-of-mouth referrals, and we can only achieve this by consistently creating high-quality software that meets—and often exceeds—our clients' expectations.
